SOFTWARE RELEASE NOTES

XONE:1D OSX Driver v2.0.8

This Driver fixes issues regarding:

- Connecting multiple Xone devices
- Multiple instances of the same device been created

Supported OS:

Mac OSX 10.5.8 (Leopard)

Mac OSX 10.6.3 (Snow Leopard)

Known issues:

- **Multiple instances of one XONE:1D device**

Unplugging/re-plugging a Xone 1D device quickly can cause the device to be displayed more than once in the MIDI setup page. This is not easy to recreate but is possible.

This will confuse digital audio applications if started up in this scenario as it is displaying the incorrect amount of devices attached and may cause devices not to respond.

To resolve this issue; go to the Mac MIDI setup page, before opening any audio application and press the 'Rescan MIDI' button. This will ensure the computer only displays the correct number of attached devices.

- **Ableton Live 7 issue**

If 2 x XONE:1D devices are connected, Ableton Live 7 will only be able to use 1 device at a time. This is a bug in Ableton Live 7.

To resolve this issue, please update to Ableton Live 8.
