

## The Requirement

A live digital mixer that can double up as a recording desk for tracking and controlling the DAW. The mixer must connect directly to the DAW avoiding the hassle of wiring and configuring third party interfaces, and facilitate low-latency foldback monitoring to the recording room.

## The Solution

All Qu mixers feature a built-in USB 2.0 interface for audio streaming to / from a Windows or Mac computer. The mixer is also used as a DAW controller thanks to the custom MIDI strips and the DAW Control driver for Mac OS X.
