

The LED's (apart from LD1) are operated in pulsed mode, being on, if required , for approximately 1/8 of the time. The current in each Green LED when on is circa 32mA and in the red LED's it is 18ma. Only 1 LED per column is on at a time. A single LEDROW bit is set and then any columns which are to have the LED in that row lit are turned on.
