

The Phoenix type 3 way screw terminal connector is available on certain Allen & Heath products as an alternative to the XLR connectors used for audio inputs and outputs.

These follow the pin convention for the standard audio XLR. Therefore, the pin layout for INPUT and OUTPUT connections is opposite as illustrated below.

An adhesive label is fitted to Allen & Heath products which have had their XLR connections replaced with the screw terminal type.

Note: Please check your wiring to ensure it adheres to the pin configuration shown here.
